Summary

Systems Test Automation Engineer with 10+ years of experience in embedded Linux, storage, and virtualization validation. Expertise in building robust Python and Bash automation frameworks to validate kernels, drivers, filesystems, and overall platform stability. Strong hands-on experience in Intel PMEM volume validation through framework enhancements, test case development, CI/CD pipeline integration, Git-based workflows, and in-depth failure analysis and debugging. Actively seeking opportunities in embedded systems, BSP validation, and automotive software validation, with a focus on Linux-based platforms.

Core Skills

- **Automation & Scripting:** Lava Test Automation, Pytest & Avacodo Framework, Python & Bash scripting for system-level & platform validation.
- **Storage & Filesystems:** PMEM, ZFS, NFS, CIFS, SMB
- **Linux & Systems:** Linux kernel validation, driver validation, CLI debugging
- **CI/CD & Tools:** GitLab CI/CD, GitHub workflows, Jenkins, Jira, Bugzilla, Octane

Experience

Wind River Systems (ELXR Project)

August 2025 – Present

BSP Validation Engineer

Bangalore, India

- Validate BSP bring-up, boot, and kernel and driver stability on ELXR embedded targets.
- Automate build, flash, boot, and regression runs via LAVA using Python and Bash scripts.
- Accelerate defect closure by isolating failures and filing Jira bugs with logs and reproduction steps.
- Cut triage time by 25% by adding structured log capture and failure signatures in automation.

OpenText (OES Install & Upgrade Team)

January 2024 – July 2025

Automation Engineer

Bangalore, India

- Validated OES module install and upgrade flows on SUSE Linux for release readiness and usability.
- Integrated RPMs into YaST workflows and repositories, verify dependency, versioning, and visibility.
- Improved install success by troubleshooting YaST integration issues and validating fixes across builds.
- Reduced integration rework by 20% using repository health checks and pre-flight validation scripts.

L&T Technology Services (Intel Client)

April 2023 – December 2023

Test Automation Engineer, Virtualization (VMware CoE)

Bangalore, India

- Validated ESXi virtualization regression for Intel accelerator drivers to support build qualification.
- Developed Avocado test cases in Python and monitored daily pipelines with first-level failure triage.
- Automated CI triggers and reporting using GitHub workflows for consistent regression execution.
- Improved infrastructure response by migrating TinyDB to MongoDB API in Dockerized service, 30% faster.

HCL Technologies (Intel Client)

October 2020 – March 2023

Automation Engineer, Persistent Memory Volume Validation

Bangalore, India

- Validated Intel Persistent Memory (PMEM) volume behavior on Linux platforms, focusing on durability, stability, data integrity.
- Designed, enhanced, and maintained Python-based automated test cases within internal validation frameworks.
- Built reusable test modules supporting multiple Linux distributions and performed manual validations to improve reliability and test coverage.
- Supported team onboarding through technical training and knowledge transfer sessions.

Infogain India Pvt Ltd (HPE SimpliVity InfoSight)

August 2019 – August 2020

QA Automation Engineer (ATF Framework)

Bangalore, India

- Validated HPE InfoSight telemetry and ETL data workflows for reliable alerts and portal reporting.
- Deployed ATF labs, ran upgrades and rollbacks, automated regressions with Perl tests and Bash scripts.
- Improved defect turnaround by logging clear Bugzilla and Jira reports with reproducible evidence.
- Reduced overnight run failures by 15% by stabilizing scripts and adding lab readiness checks.

Aziro

June 2015 – May 2019

Software Engineer, Storage and Embedded Systems

Chennai, India

- Ported and validated ZFS, built shell and fio benchmarks, automated protocol tests using Python and Bash.
- Validated Ceph and CephFS features and benchmarked RBD performance, reported regressions in Bugzilla.

Projects

Lantronix Device Server (ARM Linux, UART to Ethernet)

June 2015 – November 2016

- Ported custom applications to Linux on ARM and supported customer bug fixes across releases.
- Automated HTTP, FTP, SSH, Telnet, and routing checks using Bash for IPv4 and IPv6 validation.
- Validated TCP/IP networking behavior and reported status and defects to leads and teams.

Aquari Storage Platform (Ceph-based, Concurrent)

December 2016 – July 2017

- Tested object, file, and block storage flows and executed NFS, CIFS, SMB, and S3 test plans.
- Automated candidate cases in Python using a homegrown framework and tracked defects to closure.
- Improved regression repeatability by documenting scenarios and running ad-hoc validation as needed.

QNAP ZFS Porting and Validation (FreeBSD to Linux)

August 2017 – August 2018

- Ported ZFS from FreeBSD to Linux and fixed defects with unit and integration test coverage.
- Built a common build setup for Linux and FreeBSD and validated new SDK releases with bug reporting.
- Developed shell and fio performance framework for filesystem benchmarking and regression checks.

QNAP Hyper-Converged Storage (Ceph, iSCSI, NFS, CIFS)

September 2018 – April 2019

- Validated Ceph, CephFS, MDS, CRUSH rules, cache tiers, and cluster stability for releases.
- Benchmarked Ceph RBD performance using the Wally tool and reported regressions and tuning insights.
- Executed GUI checks on QNAP management page and verified consecutive development builds for quality gates.

Education

SRM University

2012 – 2014

M.Tech in Embedded Systems

Chennai, India

JNTU-H

2007 – 2011

B.Tech in Electronics and Communications Engineering

Hyderabad, India

Languages

- English – Full Professional Proficiency (C1)
- German – Intermediate Working Proficiency (B1, learning)
