Dear Hiring Manager,

I am writing to express my interest in Embedded Systems Software Engineer opportunities within safety-critical automotive environments. With over 10 years of experience delivering high-quality software for automotive ECUs, I bring strong expertise in embedded C development, system feature ownership, validation, and ISO 26262 functional safety compliance. My background spans braking systems, diagnostic interfaces, and platform-based development, consistently supporting successful SOPs for global OEM programs.

In my most recent role as Senior System Engineer, I owned Actuator Driver Controlled Braking (ACT\_DBRK) and Electronically Controlled Braking (ACT\_EBRK) features at system level for the MKC2 one-box braking platform. I coordinated cross-functional development activities, defined release-wise validation scope aligned with Safety Maturity Level (SML), and led structured root cause analysis for issues reported by vehicle testing teams and OEMs. Through disciplined validation planning and pre-release quality checks, I ensured feature readiness and supported stable vehicle integration.

Previously, as Technical Architect, I supported multiple braking platforms (MK100, MK120, MKC1, MKC2) for European and Chinese OEMs including BMW, VW, Volvo, Ford, Changan, SAIC, and Geely. My responsibilities included software configuration, debugging, functional enhancements using Embedded C and MATLAB/Simulink, and customer issue resolution. I played a key role in mentoring engineers and supporting more than 50 projects through SOP across four braking products. Earlier in my career at Bosch, I developed diagnostic interface modules for Euro 6D powertrain ECUs, performed integration and LabCar validation, and delivered defect-free software under strict quality and timeline constraints.

I am motivated to continue contributing to high-reliability automotive systems where functional safety, structured engineering processes, and cross-functional collaboration are critical to success. With strong experience across the V-model lifecycle, MIL/SIL/HIL validation, MISRA compliance, and configuration management tools such as Git and DOORS, I am confident in my ability to add immediate value to your engineering organization. I would welcome the opportunity to further discuss how my experience aligns with your current and future development programs.

Sincerely,  
Jayanth G
