Dear Hiring Manager,

With 8 years of experience in HVAC system design and multidisciplinary mechanical coordination, I bring comprehensive expertise in delivering technically compliant, energy efficient HVAC solutions across commercial and institutional projects. My background includes complete lifecycle involvement from concept design and load calculations to BIM coordination and construction documentation.

In my current role as Senior Design Engineer at Vee Technologies, I lead HVAC design execution for large scale developments, performing heat load calculations using TRACE 700 and HAP while modeling in Revit to ensure accurate system sizing and optimized performance. I coordinate closely with architectural and structural teams, manage RFIs, conduct Bluebeam review sessions, and supervise design quality control to deliver clash free BIM models aligned with ASHRAE, CIBSE, and SMACNA standards.

Previously, I contributed to ventilation system design, chiller piping layouts, pump room planning, and water supply and drainage systems for multiple commercial projects. My experience also includes BOQ preparation, site supervision, and supporting green building compliance frameworks. This blend of design engineering and practical execution enables me to understand both theoretical and site level challenges.

With German language proficiency at B1 level and openness to relocation, I am motivated to contribute to building services engineering projects in Germany. I am particularly interested in roles focused on energy efficient HVAC design, BIM driven coordination, and sustainable building systems.

I welcome the opportunity to discuss how my technical expertise and structured engineering approach can support your organization's projects.

Thank you for your consideration.

Sincerely,  
Sigil CR
