Dear Hiring Manager,

I am writing to express my interest in an **Engineering Manager or Senior Frontend Architecture role** within your organization. With over 10 years of experience building and scaling enterprise-grade E-Commerce and SaaS platforms, I bring strong expertise in micro-frontend architecture, design systems, and high-performance React and Next.js ecosystems for global markets.

In my current role as **Project Lead at Persistent Systems**, I lead the architecture and delivery of a scalable micro-frontend platform powering multiple SaaS products. I have defined shared UI frameworks, standardized SDK patterns, and implemented CI/CD governance models that improve developer productivity while maintaining strong security and quality controls. My focus remains on building resilient, scalable systems aligned with long-term business strategy.

Previously at **GoTo Technologies and Isobar US**, I contributed to high-traffic enterprise applications serving global audiences. I led the development of reusable design systems, improved engineering efficiency through automation and tooling, strengthened testing coverage, and modernized performance and accessibility standards. These initiatives significantly improved platform reliability, maintainability, and cross-team collaboration.

I am particularly motivated to contribute to organizations in Germany that value engineering excellence, architectural rigor, and scalable product thinking. With experience working in international teams and strong proficiency in English and German, I am confident in my ability to integrate quickly and deliver meaningful technical leadership.

I would welcome the opportunity to discuss how my experience in frontend architecture, engineering leadership, and platform modernization can support your product and technology strategy. Thank you for your time and consideration.

Yours sincerely,

Chaitanya Reddy Vaddula
