Dear Hiring Manager,

I am applying for a Senior Security Operations or Incident Response role within your organization. With over ten years of experience leading SOC and Incident Response functions across enterprise, fintech, and MSSP environments, I specialize in strengthening detection capabilities, improving response efficiency, and elevating operational maturity at scale.

In my current role at State Bank of India, I lead high-severity (P1/P2) incident response across enterprise platforms. I coordinate cross-functional SOC, IT, and business teams to drive rapid containment and remediation with precision. My focus extends beyond containment to improving detection coverage, reducing false positives, and strengthening SOC readiness through threat hunting and structured maturity initiatives. Through disciplined escalation workflows and KPI-driven management, I have consistently delivered measurable improvements in response time and operational quality, while leading tabletop exercises (TTX) to enhance incident preparedness across internal and overseas teams.

Previously, as SOC Lead at HCL Technologies, I managed 24x7 SOC operations supporting enterprise clients across the US and EU. I led multi-tier analyst teams, enhanced detection accuracy through SIEM tuning and process optimization, and ensured SLA and KPI adherence across complex environments. Progressing from SOC L1 to L3 and leadership roles has provided me with a comprehensive understanding of structured incident lifecycle management, detection engineering, and enterprise-scale security operations, supported by strong stakeholder and team leadership.

My experience spans SIEM platforms (Splunk, QRadar, Elastic), EDR/XDR technologies (SentinelOne, Cortex, Trend Micro), and enterprise email protection solutions. I align SOC operations with frameworks such as MITRE ATT&CK and support governance through structured reporting, audit coordination, and continuous improvement programs. I am particularly motivated by Germany's strong emphasis on engineering discipline, operational excellence, and evolving EU cybersecurity frameworks.

I am open to relocation under the EU Blue Card or employer-sponsored work authorization and am committed to contributing long-term within a product-driven or enterprise organization. I would welcome the opportunity to contribute to a security organization that values operational excellence, accountability, and continuous improvement.

Sincerely,

Mohit Parashar
