Dear Hiring Manager,

I am applying for Facility and Electrical Engineering roles in Germany where operational reliability, safety compliance, and energy efficiency are critical. I bring 13+ years of hands-on experience managing industrial electrical systems, utilities, and facility operations in high-load environments.

In my current role as Facility Supervisor at UPSFM integrated services, I manage electrical operations covering MV/LT panels, transformers, DG sets, UPS, and BMS-controlled utilities. I track daily energy consumption, lead preventive maintenance programs, and coordinate machine modifications with engineering and production teams. These actions reduced unplanned downtime by 20% and improved compliance with internal safety standards.

Previously, as a Team Leader at Enova Facility Management, I handled large-scale electrical infrastructure including DG sets up to 2500 KVA, UPS systems, and 360 TR chillers. I maintained continuous power availability through structured maintenance planning, root-cause analysis, and disciplined reporting. This approach improved system reliability by 25% across multi-site facilities and ensured readiness for audits and inspections.

I also bring strong vendor and contractor management experience. I coordinate service providers, enforce SLAs, validate invoices, and close work orders on schedule. I work closely with safety teams to apply hazardous area classifications, electrical safety rules, and 5S practices. My background aligns well with Germany's expectations for structured documentation, preventive planning, and compliance-driven operations.

I am particularly interested in Germany's industrial and facility engineering roles that emphasize energy efficiency, operational continuity, and technical accountability. I adapt quickly to regulated environments, follow defined processes, and take ownership of outcomes. I am actively preparing for long-term relocation and professional integration in Germany.

I welcome the opportunity to contribute my electrical and facility management expertise to your organization. I am available for further discussion at your convenience.

Sincerely,

Ram Kumar S
