Dear Hiring Manager,

I am applying for Project Manager roles in Germany where enterprise delivery, IT service governance, and cross-functional execution are core priorities. With over 14 years of experience delivering large-scale technology and infrastructure programs across healthcare, retail, and banking, I bring a delivery-focused mindset aligned with Germany's standards for structure, reliability, and operational excellence.

In my current role at NTT Ltd, I lead end-to-end delivery of enterprise infrastructure initiatives, managing scope, schedules, vendors, and risk across complex, multi-team environments. I drive execution using Agile and Waterfall models, maintain strong RAID governance, and ensure projects meet cost, timeline, and quality benchmarks. My work consistently reduces delivery risk, improves predictability, and strengthens stakeholder confidence across regional and global teams.

Previously at Unisys and Hewlett Packard Enterprise, I worked in high-availability service environments supporting global clients with strict SLA and compliance requirements. I managed critical incidents, coordinated resolver teams across geographies, and delivered structured executive reporting. These roles strengthened my ability to operate in regulated environments, manage escalations decisively, and maintain service continuity under pressure.

I bring hands-on expertise in ITIL-based service management, vendor coordination, PMO reporting, and stakeholder communication. I work comfortably with tools such as Jira, ServiceNow, MS Project, and Confluence to drive transparency and execution control. My experience across healthcare IT, retail systems, and banking infrastructure aligns well with Germany's enterprise and industrial technology landscape.

I am actively seeking opportunities in Germany where disciplined project execution, accountability, and continuous improvement are valued. I am prepared to relocate and contribute immediately to delivery-focused teams operating in structured, high-performance environments.

I welcome the opportunity to discuss how my experience can support your organization's delivery and transformation goals.

**Sincerely,
Shubhajit Ghosh**
