Dear Hiring Manager,

With over a decade of high-impact experience in AMR genomics, molecular diagnostics, and regulated laboratory environments, I am writing to express my strong interest in joining your organization. As a PhD-qualified scientist with a deep specialization in Whole Genome Sequencing (WGS), targeted NGS, and clinical microbiology, I offer a unique combination of academic rigor and operational expertise. Having recently served as a Guest Faculty and Postdoctoral Associate, I am eager to transition my skills into a senior-level industry or clinical research role within Germany's world-class biotechnology sector.

My career has been defined by a commitment to precision and regulatory excellence. During my tenure at PGIMER, I led critical research on carbapenem and colistin resistance, sequencing over 100 isolates using Illumina and ONT platforms. My work is not limited to data generation; I specialize in standardizing SOPs, improving run-readiness metrics, and ensuring that every workflow from DNA extraction to library QC is audit-ready and compliant with international standards. My ability to resolve contamination flags and reduce repeat sequencing has consistently improved laboratory efficiency and resource management.

Beyond the bench, I bring significant experience in pharmacokinetics and pharmacodynamics (PK/PD). My research on minocycline involved murine infection models and drug quantification via HPLC, utilizing Phoenix WinNonlin and NONMEM for sophisticated exposure-response modeling. This technical breadth allows me to bridge the gap between microbiology and pharmacology, providing a holistic approach to drug resistance and diagnostic challenges. Furthermore, my experience as a Laboratory Instructor during the COVID-19 pandemic, where I trained over 200 personnel on qRT-PCR and GeneXpert protocols, highlights my ability to lead and scale operations in high-pressure, fast-paced environments.

I am highly motivated to relocate to Germany and contribute to your team's scientific objectives. I possess full professional proficiency in English and am actively building my German language skills (currently A1). My background in maintaining GLP-compliant documentation and my experience with institutional inspections (NABH, CGHS) ensure that I will be a seamless fit for a quality-driven organization.

Thank you for your time and consideration. I am eager to discuss how my technical expertise in genomics and my disciplined approach to laboratory leadership can support your organization's mission.

Kind regards,

Dr. Salony Verma
