Dear Hiring Manager,

I am writing to express my interest in opportunities aligned with Senior Technical Business Analyst or Data Engineering roles within your organization. With over 10 years of experience in global banking environments, including leadership roles at Commonwealth Bank of Australia and Wells Fargo, I specialize in translating complex regulatory and treasury requirements into scalable, production-grade ETL architectures. I bring a strong blend of business analysis, regulatory expertise, and hands-on engineering execution.

In my current role as Senior Technical Business Analyst at Commonwealth Bank of Australia, I own treasury and liquidity workflows, ensuring APRA-compliant regulatory outcomes and accurate LCR submissions. I translate regulatory requirements into robust Ab Initio ETL solutions, leveraging BRE, Express IT, and structured documentation practices. I have consistently delivered audit-ready monthly submissions with zero compliance deviations while resolving Tier-3 production incidents to protect data integrity and service-level commitments.

Previously at Wells Fargo, I engineered enterprise-scale ETL pipelines supporting over 45 banking applications across branch and ATM ecosystems. I developed and optimized Ab Initio and Informatica workflows using UNIX and Autosys, significantly improving batch stability and SLA adherence. In addition to technical delivery, I led offshore coordination, conducted root cause analyses, and supported audits for mission-critical systems operating in highly regulated environments.

I am particularly motivated to contribute to Germany's strong financial and regulatory ecosystem, bringing experience in LCR frameworks, APRA compliance, data quality governance, and DevSecOps-driven release management. With professional proficiency in English and intermediate German (B1), I am prepared to integrate quickly into cross-functional European teams and deliver measurable value from day one.

Sincerely,

Raj Kumar Anjali Devi
