Dear Hiring Manager,

I am writing to express my interest in senior RPA and automation roles within your organization. With over six years of experience delivering enterprise-grade automation solutions using UiPath, Microsoft Power Automate, and Blue Prism, I bring strong technical depth combined with hands-on leadership across complex automation programs.

In my recent role as Senior RPA Developer / Lead at Azee Systems Inc., I led end-to-end automation delivery for public-sector workflows, covering requirements analysis, solution design, development, deployment, and production support. I designed scalable REFramework-based solutions with queue management, retries, centralized logging, and multi-environment deployments, while integrating AI-powered document understanding using OCR, ML, and NLP. These initiatives reduced manual processing effort by up to 60 percent and consistently maintained over 99 percent bot uptime in production environments.

Previously at Accenture, I led large-scale RPA initiatives across healthcare, insurance, and manufacturing clients, delivering more than 30 production-grade automations. I architected solutions integrating SAP, mainframe systems, APIs, and SQL back ends, optimized execution runtimes by 40 percent, and collaborated closely with global stakeholders to define automation roadmaps and governance standards. I have also successfully guided teams through transitions from UiPath to Microsoft Power Automate as part of broader platform modernization efforts.

I am particularly interested in opportunities in Germany due to the country's strong focus on engineering excellence, automation maturity, and long-term digital transformation. I am open to relocation, hold professional working proficiency in English (C2) and intermediate working proficiency in German (B1), and am comfortable operating in multicultural, distributed teams.

I would welcome the opportunity to discuss how my experience in scalable automation architecture, production reliability, and team leadership can support your organization's automation objectives.

Sincerely,

Akhilesh Bharadwaj
