Dear Hiring Manager,

I am writing to apply for a **Telecom Field Service Engineer** position within your organization. With over three years of hands-on experience in telecom infrastructure deployment and broadband operations, I bring strong technical capability in fiber optic splicing, fiber network maintenance, and SLA-driven field service delivery.

In my current role at **Bharti Airtel**, I support telecom network deployment and maintenance, including fiber optic splicing, OTDR testing, and tower operations, while ensuring strict adherence to EHS and safety standards. I contribute to improved network reliability through preventive maintenance and efficient fault resolution, and coordinate with cross-functional teams to ensure timely project execution. My field experience, including height-based operations, has strengthened my safety awareness, precision, and ability to deliver consistent service quality.

Alongside infrastructure deployment, I manage FTTH broadband installations and fiber **O and M operations** across assigned clusters. My responsibilities include splicing, termination, signal testing, fault diagnosis, and restoration within defined SLA timelines. Through structured troubleshooting and preventive checks, I have contributed to improved first visit resolution and enhanced network uptime while maintaining accurate documentation and service reporting.

Germany's strong focus on telecom modernization and fiber expansion aligns closely with my field experience and technical background in electronics and communication engineering. I am motivated to contribute to high-quality infrastructure deployment, reliable service delivery, and strict safety compliance within a structured and performance-driven environment.

I welcome the opportunity to discuss how my telecom field experience and technical expertise can support your network operations team. Thank you for your time and consideration.

Yours sincerely,

Bishutosh Sharma
