Dear Hiring Manager,

I am applying for Software Engineer (AI) roles in Germany with a focus on AI-backed backend systems and cloud-native platforms, where I can build reliable, scalable, and production-grade AI-driven services. I bring 2+ years of hands-on experience building production-grade LLM solutions, metadata-driven retrieval systems, and scalable services used by real enterprise teams.

At Guidewire Software, I architect an AI-first insurance data intelligence platform combining metadata knowledge graphs and agentic AI assistants, improving data discovery speed by 60% and reducing manual exploration effort. I build DataGPT to extract schemas, entities, and SQL definitions and construct lineage graphs using Kahn's algorithm, reducing data mapping effort by 40% and improving processing efficiency. I generate LLM-enriched YAML knowledge artifacts to standardize metadata and enable reuse across teams. I also build RAG pipelines for schema exploration, NL-to-SQL, and intent routing, reducing query generation time by 55% and improving response latency by 30%. Additionally, I deliver secure multi-tenant AWS architecture handling large-scale datasets, improving SQL accuracy by 70% and reducing data retrieval latency by 25%, with a strong focus on reliability and clean service design.

My background in machine learning strengthens my engineering work. As a Teaching Assistant at IIIT Bangalore, I supported postgraduate Machine Learning coursework for 60+ students through lectures, labs, and evaluations. I mentored students on model experimentation, evaluation, and end-to-end ML project development, strengthening my ability to communicate complex concepts and apply ML in practical scenarios.

Earlier, at Bosch Global Software Technologies, I worked on embedded and connected systems for battery health monitoring and tyre pressure management. I collaborated across hardware and software teams and delivered systems that handled real-time sensor data. This foundation helps me design robust systems that operate under real-world constraints.

I have completed my Master's degree in Machine Learning and Artificial Intelligence and am seeking long-term professional opportunities. I am particularly interested in teams working on AI platforms, data-intensive systems, and scalable backend services, where correctness, performance, and long-term maintainability are critical.

Sincerely,

Aishwarya V Koushik
