Dear Hiring Manager,

I am applying for Senior Data Analyst roles in Germany, where strong analytics, reporting rigor, and stakeholder trust are critical. I bring 7+ years of experience building reliable performance reporting and decision-support analytics in staffing and consulting environments, with hands-on ownership of Power BI dashboards, SQL validation, and reporting automation.

In my current role at Aditi Consulting, I own end-to-end performance reporting used by recruiters, managers, and directors. I design Power BI dashboards across 10+ KPIs, validate multi-source datasets exceeding one million rows, and automate OKR and RnR reporting using Excel and VBA. These initiatives reduced manual reporting effort by 30 percent and improved review cycle time, while maintaining high data accuracy standards expected in regulated and metrics-driven organizations.

Earlier roles strengthened my operational analytics foundation. As a Senior MIS Executive at Velocity and Trell, I delivered recurring management reports, standardized Excel-based reporting, and improved turnaround time through process optimization. I worked closely with business stakeholders to ensure reporting consistency, reconcile data discrepancies, and support weekly and monthly performance reviews. This experience shaped my ability to translate raw data into clear, actionable insights for leadership teams.

I am currently expanding my technical depth through a structured Data Science program covering Python, statistics, SQL, and applied analytics. This allows me to complement my BI and reporting expertise with modern analytical methods that align well with Germany's data-driven and compliance-focused work culture.

I am open to relocating to Germany and motivated to contribute in environments that value precision, accountability, and scalable analytics. I would welcome the opportunity to discuss how my experience can support your reporting, performance management, and business intelligence goals.

Sincerely,

Nagadarshan
