Dear Hiring Manager,

Looking for Senior Clinical Data Manager and Pharmacovigilance roles in Germany who keeps trials inspection ready while staying close to data issues at sites, laboratories and affiliates. With more than 7 years across global phase three and post marketing studies in biopharmaceutical and contract research organisations, I combine risk based data review, external data reconciliation and Argus based safety operations in a way that matches German sponsor and CRO expectations.

In my current role at ICON as Senior Clinical Data Coordinator, I lead end-to-end conduct and closure for multiple global studies and in neurology. Responsibilities include planning risk based data review, aligning data management plans with protocols, coordinating Inform electronic data capture set up and vendor data flows, and reconciling clinical and safety datasets for serious adverse events and endpoints. Key performance indicators are tracked so database lock and data transfers complete on time and remain audit ready.

At Novo Nordisk, I worked as Data Manager and Clinical Data Insights Analyst and earlier as Senior Drug Safety Associate and Drug Safety Associate. I led risk based data review and external data strategy for rare disease trials, provided guidance and support for building D Vista, and orchestrated central laboratory, imaging and electronic patient reported outcome transfers. These reconciliations and reports supported inspections with no material data management findings, while Argus based case processing, literature surveillance and standard operating procedure authorship earned a Going Extra Mile award for performance above 180% of targets.

This mix of clinical data management and pharmacovigilance supports close collaboration with biostatistics, clinical operations, medical safety and vendors. Work is guided by Good Clinical Practice, International Council for Harmonisation guidelines and good pharmacovigilance practice, and I regularly present reconciliation status, query metrics and database lock readiness to study leaders. Relocation to Germany is a clear priority, and German language skills are progressing towards intermediate working proficiency.

I would welcome the opportunity to contribute this experience to your clinical development and safety organisation in Germany. Thank you for considering my application.

Sincerely,

Renuka Sravya Thatavarthi
