Dear Hiring Manager,

I am writing to express my interest in a **senior operations or plant leadership position** within your organization. With over 18 years of experience in plastics and packaging manufacturing after M.Tech in Plastics Engineering, I have led extrusion blow moulding, injection moulding, injection stretch blow moulding, injection blow moulding, Twin screw extruder and Blown films operations across regulated and high-volume production environments.

Currently serving as **Plant Head at Ukhi India Private Limited**, I lead commercial-scale biopolymer/compostable granules for the application of Blown film/Injection Moulding & Thermoforming products manufacturing, focusing on throughput optimization, process consistency, cost reduction, and preventive maintenance excellence. My work centers on scaling sustainable materials production, improving first-pass yield, reducing per-unit production cost, and ensuring strict adherence to quality and environmental compliance standards.

Across my career, I have successfully established new manufacturing units, implemented structured QMS and EMS frameworks, optimized production planning and control systems, and strengthened vendor and client partnerships. My experience also includes working in **Germany with Arrow Plast GmbH**, where I supported production and running NGR Machines and improved process optimization aligned with EU quality standards. This international exposure has strengthened my understanding of structured manufacturing governance and operational discipline.

With a strong technical foundation in plastic engineering and materials development, combined with hands-on plant leadership experience, I am motivated to contribute to organizations in Germany that value operational excellence, sustainable manufacturing, and continuous improvement culture. My intermediate German proficiency further supports my ability to integrate into cross-functional European teams.

I would welcome the opportunity to discuss how my experience in manufacturing scale-up, process optimization, and quality-driven operations can support your production and growth objectives. Thank you for your time and consideration.

Yours sincerely,

Vinaya Kumar
