Dear Hiring Manager,

I am writing to express my interest in **Data Engineering** opportunities within your organization. With over 10 years of experience in building scalable data pipelines and data warehouse solutions, particularly in the healthcare domain, I bring strong expertise in ETL development, SQL-based data modeling, and large-scale data processing.

In my current role at **Merative Technologies**, I design and maintain ETL pipelines that process complex healthcare datasets, including patient records, claims, and clinical data from multiple sources. I ensure strict adherence to HIPAA compliance standards by implementing secure data storage and governance practices. I have also optimized data warehouse performance through indexing and query tuning, reducing reporting latency by 40% and improving overall system efficiency.

Previously, at **IBM Consulting**, I worked closely with business stakeholders to translate healthcare requirements into scalable data models supporting population health analytics. I developed BI dashboards for clinical and operational KPIs, enabling data-driven decision-making for leadership teams. My work involved applying analytics to identify high-risk population segments and improving reporting processes, enhancing operational efficiency and data accessibility.

Earlier in my career at **Truven Health Analytics**, I managed large-scale healthcare data operations for multiple US state government clients, ensuring data accuracy, reliability, and timely delivery. I also contributed to system stability and performance improvements while mentoring teams and supporting issue resolution workflows.

I am particularly interested in opportunities in Germany, where there is a strong focus on data privacy, regulatory compliance, and advanced data-driven healthcare systems. With my experience in healthcare data engineering, regulatory frameworks, and scalable data architectures, along with my intermediate German proficiency, I am confident in my ability to contribute effectively in a global and compliance-driven environment.

I would welcome the opportunity to discuss how my experience in data engineering, data governance, and analytics can support your organization's data and technology objectives.

Thank you for your time and consideration.

Sincerely,

Nivedhitha B
