Dear Hiring Manager,

I am writing to express my interest in **Senior Software Engineer or Cloud Engineer** opportunities within your organization. With more than thirteen years of experience designing and delivering scalable enterprise applications and distributed systems, I bring strong expertise in .NET-based microservices architecture, cloud-native development, and modern DevOps practices.

In my current role as **Senior Software Engineer at EssilorLuxottica**, I design and implement cloud-native microservices using **.NET Core and Microsoft Azure** to support highly scalable enterprise platforms. My responsibilities include developing RESTful APIs, integrating event-driven messaging through Azure Service Bus, and building serverless applications using Azure Functions and API Gateway. I also implement CI/CD pipelines using Azure DevOps and monitoring solutions through Azure Monitor and Application Insights to improve deployment efficiency and operational visibility across distributed systems.

Previously at **Cognizant**, I worked as a **Senior Software Developer** and Technical Lead, where I led modernization initiatives to migrate legacy enterprise applications to microservices architecture. I designed scalable backend APIs, optimized system performance, and managed end-to-end software delivery across cross-functional engineering teams. This experience strengthened my expertise in distributed systems design, scalable architecture patterns, and enterprise platform reliability.

Earlier in my career at **IBM and Crystal Info Systems**, I developed modular enterprise applications and participated in system modernization programs, translating business requirements into scalable and maintainable software solutions. My work involved collaborating closely with stakeholders, improving application performance, and implementing reporting and data solutions that supported business operations.

My **technical expertise** includes **C#, .NET Core, React, Azure cloud services, microservices architecture, event-driven systems, and distributed application design**. I also have hands-on experience with CI/CD automation, database optimization, and system observability tools. In addition, I am expanding my capabilities in Artificial Intelligence and Machine Learning, including Python, NLP, and LLM-based application development to support intelligent cloud platforms.

I hold a **Bachelor of Engineering in Information Science from Visvesvaraya Technological University** and am currently pursuing an **Executive Post Graduate Certification in Data Science and Artificial Intelligence from IIT Roorkee**. I also hold the **Microsoft Azure AI Fundamentals certification** and continue to strengthen my expertise in **modern cloud and AI technologies**.

Germany's strong technology ecosystem and focus on innovation in cloud platforms and enterprise software development align closely with my professional experience and career goals. With my background in cloud-native architecture, microservices engineering, and scalable distributed systems, I am confident in my ability to contribute effectively to engineering teams building advanced software platforms. I also have intermediate proficiency in German and continue improving my language skills to integrate successfully into professional environments in Germany.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience in software engineering, cloud architecture, and distributed systems can contribute to your organization.

Sincerely,
Akshay Kumar G K
