Dear Hiring Manager,

I am applying for Payments UAT / Testing Analyst roles in Germany, focused on ISO 20022 change releases across **SEPA, CHAPS, TARGET2, and CBPR+** payment flows. I bring 3+ years of hands-on payments testing and business-facing UAT in regulated environments, with strong ownership of requirement-to-evidence traceability, defect triage, and release sign-off support.

In my role at NatWest Group, I run UAT and regression coverage for payment changes impacting ISO 20022 messaging, reconciliation, and settlement operations. I translate requirements into executable scenarios, test cases, and UAT packs, then coordinate with business analysts, operations, and platform teams to complete testing within controlled release windows. I also manage the end-to-end defect lifecycle in **JIRA**, closing 10-25 defects per release while maintaining audit-ready evidence for sign-off and governance needs.

My domain depth covers **SEPA, CHAPS, TARGET2, and CBPR+** workflows, including validation of message behavior, UETR updates, and reference-handling issues that affect downstream matching and reporting. I use Oracle SQL to validate business rules and data movement across payment journeys, and I reconcile outcomes using operational reports to isolate defects quickly and reduce rework. This improves decision-making during go/no-go conversations by surfacing risks early and backing findings with clear evidence.

I will bring the same execution discipline to a Germany-based bank or payments organization working through ISO 20022 migration, payments modernization, or SEPA change delivery. I work well in cross-functional teams, communicate precisely in defect triage and stakeholder updates, and keep testing assets consistent and traceable from requirements through sign-off.

I would welcome the opportunity to discuss how I can support your payments change pipeline and strengthen release quality across **ISO 20022, SEPA, CHAPS, TARGET2, and CBPR+** flows.

Sincerely,

Vaishnavi Thirumurugan
