Dear Hiring Manager,

I am applying for senior Project Manager roles in Germany, focused on Service Delivery, Major Incident Management, and Modern Workplace operations. I bring 15+ years leading ITIL-aligned service assurance and transitions across Service Desk, Command Center, and EUC environments. I build stable operating rhythms, tighten escalations, and keep services predictable against SLAs while scaling cross-tower delivery.

At Infosys, I manage delivery across four concurrent infrastructure programs spanning Service Desk, Command Center, and Modern Workplace. I run governance cadence, capacity and resource planning, KPI reviews, and escalation control across cross-geo teams. This approach has improved client retention by 30% and saved 500+ engineering hours per year through delivery optimization. I also drive automation for Wintel and Linux routines, achieving 300+ hours per day of time savings while leading a 120-member delivery team and maintaining strong customer feedback scores (ELF 5/5, CVS 6/7).

I recently built and transitioned a Service Desk and Contact Center for Wolfspeed, including hiring, training, SOPs, knowledge base, and workflow standardization. I delivered a \$2.5M transition three weeks early and improved customer satisfaction by 20% post go-live. Earlier, I led ITSM and Command Center operations across Linux, compute, network, VMware, cloud, and database towers, improving SLA adherence by strengthening ITIL playbooks, ticket hygiene, and service assurance routines. I also bring deep service restoration experience from Accenture, where I reduced incident volume by 55% through trend-driven prevention and cut NOC queue by 25% by forecasting SLA demand and optimizing workflows.

Germany teams value operational clarity, compliance, and measurable outcomes. I bring disciplined incident command, escalation governance, service reporting, and continuous improvement practices that translate directly to enterprise environments. I would welcome the opportunity to discuss how I can strengthen your service delivery, reduce operational risk, and improve SLA performance.

Sincerely,

Frieda Manjaly
