Dear Hiring manager,

I am writing to express my interest in regulatory affairs and homologation opportunities within the automotive and EV sector in Germany or the wider EU. With over five years of experience in regulatory compliance and market access across EU WVTA, UNECE, FMVSS, GB, and APAC standards, I have developed a proven ability to translate complex regulations into design requirements, manage type-approval submissions, and work effectively with authorities and accredited laboratories to secure timely certifications.

In my current role as Senior Regulation Compliance Engineer at Valeo, I have been responsible for mapping UNECE and EU clauses into design inputs and verification plans, coordinating witness testing with labs and authorities, and enforcing change-control processes to maintain full traceability. These efforts have consistently shortened approval lead times, reduced audit findings, and minimized the risk of retests. I have also introduced standardized templates, KPI dashboards, and status reviews, which improved decision-making and increased first-pass approval rates. Beyond technical contributions, I have provided training to R&D and validation teams on EU versus export compliance requirements, enhancing audit readiness and submission quality across programs.

Earlier, during my tenure as an R&D Engineer at BIT, I authored conformity documentation, technical files, and risk assessments for multiple markets while coordinating with external labs to ensure smooth approval processes. This experience gave me a solid grounding in managing documentation, preparing evidence packs, and ensuring full traceability of reviews and decisions for audit and regulatory purposes.

I hold an M.Tech in Mechatronics from VIT University and a B.E. in Mechanical Engineering from Anna University. I am fluent in English at a professional level (C1) and possess intermediate proficiency in German (B1), which enables me to integrate effectively into multicultural teams and support cross-border regulatory projects.

I am highly motivated to contribute to your company by supporting your compliance and homologation initiatives for advanced mobility solutions. I would welcome the opportunity to discuss how my background in regulatory affairs, homologation, and cross-functional collaboration can add value to your team.

Thank you for your consideration. I look forward to the possibility of an interview.

Sincerely,

Prakash Maniyarasan
