Dear Hiring Manager,

I am writing to express my interest in the Cyber Security role within your organization. With over 10 years of overall IT experience—including nearly 5 years in Security Operations Center (SOC) environments—I bring strong expertise in incident management, threat intelligence, vulnerability management, and enterprise security operations.

Currently working as a Consultant at Capgemini, I am actively involved in implementing and managing advanced security solutions across enterprise environments. My responsibilities include deploying and optimizing CrowdStrike Falcon for endpoint protection, implementing Delinea (Thycotic) Privilege Manager and Secret Server for privileged access management, and managing Varonis Data Advantage for data security and classification. I have hands-on experience installing and configuring Rapid7 InsightVM for vulnerability management across on-premises and multi-cloud infrastructures, as well as managing Cisco Umbrella and Avanan for web and email security.

Previously, at ValueLabs and Wipro, I worked in 24x7 SOC environments performing L1 and L2 activities including monitoring SIEM dashboards (IBM QRadar, Azure Sentinel, Splunk), log analysis, threat detection, phishing investigations, brute force and reconnaissance attack analysis, and incident response coordination. I have strong experience in email header analysis, malware investigation, IOC tracking, and coordinating with cross-functional teams to mitigate high-priority incidents effectively.

Throughout my career, I have developed Standard Operating Procedures (SOPs), provided stakeholder reporting, participated in CAB meetings, and ensured timely resolution of security incidents while maintaining SLA compliance. My background also includes experience in Oracle-based enterprise applications during my early career, which strengthened my understanding of database security, log analysis, and enterprise integrations.

I hold a B.Tech in Computer Science from JNTU Kakinada and possess strong analytical skills, attention to detail, and the ability to perform under pressure in critical security situations. My goal is to contribute to a forward-thinking organization where I can leverage my technical expertise to enhance security posture, reduce risk exposure, and proactively defend against evolving cyber threats.

I look forward to the opportunity to discuss how my skills and experience can add value to your cyber security team.

Thank you for your time and consideration.

Sincerely,

Anjaneya Dhulipudi
