Dear Hiring Manager,

I am applying for Product Designer roles in the United Arab Emirates. Over three years, I have delivered enterprise SaaS dashboards and public-sector portals that improve usability and adoption. At Particle Black India, I owned UX for a Product Information Management platform, delivering more than 50 dashboards and workflows that lifted product engagement by 50 percent. Through targeted usability studies and information architecture improvements for a Foster Care portal, I cut average task time by 50 percent. I also produced more than 50 onboarding and training videos that accelerated adoption for over 200 users.

My toolset and process are built for hands-on delivery and clean developer handoff. I work end to end with Figma and FigJam, create reusable design systems and responsive components, and provide annotated specs that reduce rework. On recent releases, clearer specs and component usage reduced design to development iteration cycles by 30 percent and lowered rework by 25 percent. Earlier at AffinityX, I created high-volume print and digital assets, including press-ready newspaper ads with zero reprints, which strengthened my attention to layout precision and brand consistency.

My education includes a Diploma in UI/UX and Graphic Design from IGT and a Bachelor of Engineering in Metallurgical and Materials Engineering from BPUT. This blend of design training and engineering foundations helps me translate complex requirements into simple flows and measurable outcomes. Core strengths include user research, wireframing, prototyping, information architecture, design systems, accessibility, and responsive web design. I am fluent with Adobe XD, Illustrator, Photoshop, InDesign, CorelDRAW, Canva, and Premiere Pro, and I document decisions to keep cross-functional teams aligned.

I am open to relocation to the UAE and ready to contribute to product teams focused on enterprise web and public-sector experiences. I would welcome the chance to discuss how these outcomes can support your roadmap.

Sincerely,
Sanket Mohapatra
