**Dear Hiring Manager,**

I am applying for analyst and trading-desk roles in Germany where disciplined execution, risk governance, and data-driven decision-making are essential. I bring over four years of hands-on experience trading FX, Gold, and equity index futures in proprietary environments that enforce strict drawdown controls and capital preservation rules.

In my current role as an independent proprietary trader, I manage intraday exposure across multiple asset classes under predefined risk limits. I execute liquidity-based price action strategies using session-specific frameworks and tight position sizing. I track every trade through structured journals and performance dashboards, allowing me to refine execution quality, control variance, and improve risk-adjusted returns. This experience mirrors the accountability and process discipline expected on regulated trading desks.

My background in mechanical engineering strengthens my analytical approach. I work comfortably with data, models, and structured problem solving. During my project tenure with the Indian Space Research Organisation, I led a university-selected team on experimental and computational research, collaborating closely with senior engineers and validating results against real-world data. That exposure shaped my ability to operate in high-precision, compliance-driven environments—an approach I now apply to financial markets.

I am particularly interested in Germany's structured financial ecosystem, where transparency, risk control, and process integrity are core expectations. I am prepared to contribute immediately in roles involving market analysis, trade support, risk monitoring, performance reporting, or execution analytics. I work fluently in English and bring working proficiency in German, enabling smooth collaboration in international teams.

I would welcome the opportunity to discuss how my trading experience, analytical discipline, and risk-first mindset align with your team's objectives. Thank you for your time and consideration.

**Sincerely,**

**Adithya Krishnan Kanavillil**
