Dear Hiring Manager,

I am writing to express my interest in **Electrical Wiring Interconnection System (EWIS) or Electrical Harness Design Engineer** opportunities within your organization. With over two years of experience supporting Boeing aircraft programs through engineering services providers, I specialize in electrical harness routing, installation design, and manufacturing-ready documentation using CATIA V5, 3DEXPERIENCE, and ENOVIA environments.

In my current role as a **Design Engineer at Cyient** supporting Boeing programs, I work on EWIS routing for aircraft interior systems on the 777X platform. My responsibilities include defining harness routing paths, placing connectors, clamps, and brackets, and producing detailed 2D formboards for manufacturing using CATIA V5. I conduct DMU validations, tolerance and clash analysis, and node/network checks while ensuring compliance with separation rules and installation constraints. I also manage engineering change control and publish E-ICD updates to maintain accurate interface documentation across system releases.

Previously, while **working with San Engineering Solutions** on Boeing programs, I contributed to legacy model migration and electrification activities by converting CATIA V4 models and PI drawings into CATIA V5 routable assemblies. My work included bundle routing, connector placement, application of installation notes and EMC separation codes, and generating EMA reports for design validation. Through structured attribute mapping and improved documentation practices, I supported reductions in design cycle time and improved downstream manufacturability.

My work emphasizes first-time quality, disciplined configuration control, and clear manufacturing documentation. By introducing standardized templates and documentation practices, I contributed to maintaining 100% on-time delivery and improving first-time quality across EWIS releases. I regularly collaborate with suppliers, production teams, and cross-functional engineering groups to ensure robust installation design while minimizing design churn and schedule risk.

I hold a **Bachelor's degree in Mechanical Engineering from Rajiv Gandhi Proudhyogiki Vishwavidyalaya** and have further strengthened my expertise through specialized training in harness component design, product lifecycle management, and sheet-metal design. I also hold a Chancenkarte (Opportunity Card) visa and have intermediate proficiency in German, allowing me to integrate effectively into professional environments in Germany.

Germany's strong aerospace ecosystem and engineering excellence strongly align with my professional interests. With my experience in EWIS design, CATIA-based harness development, and aerospace manufacturing documentation, I am confident in my ability to contribute to aircraft design and development programs within your organization.

Thank you for considering my application. I would welcome the opportunity to discuss how my EWIS design experience can support your engineering teams.

Sincerely,
Afzal Khan
