Dear Hiring Team,

I am seeking opportunities in Germany where I can help design and deliver scalable platforms, data-driven features, and reliable mobile/web experiences. With 16 years across architecture, mobile ecosystems, and applied machine learning, I focus on clear outcomes growth, uptime, faster cycles, and measurable quality.

At PrimeSopfic Technologies, I architected ERC Guaranteed, a tax-refund SaaS with CRM plus affiliate and client portals that scaled to >100,000 direct clients and 1M+ users on Python/Django and AWS (EC2, S3, AuroraDB). I led IntelligenEHR, a behavioral health EHR with a predictive engine and integrated telehealth, automating intake and therapist workflows and reducing manual steps by 40%. I launched DiscoverTX to extend post-treatment support, lifting therapist-patient touchpoints by 25%, and I set design reviews and quality gates that cut production defects by 30%.

At Invenger Technologies, I built an ML document-indexing pipeline that raised auto-classification accuracy to 92% and reduced manual effort by 60% using TensorFlow, Clarifai, Numpy, and pandas. I delivered a merchant portal with SAML 2.0 SSO that shortened onboarding by 30%, and shipped InsurPay for field adjusters, trimming cash-collection cycle time by 25% through offline capture and sync.

At Access International (Chicago), I engineered a Proof-of-Delivery ecosystem for iPad that reduced driver stop time by 20% and improved reconciliation by 15%. I optimized the ProSel iPad order-entry app for million-record offline datasets and deployed it across 25+ enterprise clients. I also built OrderShark (iOS/Android) with barcode scanning that accelerated store-level order entry by 30%.

I am currently pursuing an MS in Data Science & AI at the International University of Applied Sciences (Berlin) and hold IABAC Certified Data Scientist and ML Expert credentials. My toolkit spans AWS, OAuth 2.0/SAML 2.0, SQL/NoSQL databases, iOS/Android, Angular, and data libraries such as pandas and TensorFlow. I value clear roadmaps, transparent metrics, and hands-on collaboration with product, security, and operations.

I look forward to contributing to a Germany-based team that prioritizes scalable architecture, predictable delivery, and measurable impact. Thank you for your time and consideration.

Sincerely,
Durgadas Shetty
