Dear Hiring Manager,

I am applying for senior product leadership roles where AI, data platforms, and commercial outcomes sit at the core of product strategy. Over the past decade, I have built and scaled Generative AI, agentic AI, and data platforms that deliver measurable revenue growth, productivity uplift, and customer impact across large, complex organisations.

In my current role as Group Product Manager at Flipkart, I lead the vision and execution of AI platforms used across multiple business units. I own platform strategy, governance, and roadmaps for enterprise products operating at scale. My work has increased user engagement by 30%, improved productivity by 35%, and lifted customer satisfaction by 65%. I also manage a \$100M annual budget and lead multidisciplinary teams across product, engineering, analytics, and data science.

Previously at Rakuten, I launched a cloud-native data science platform that unified analytics, machine learning experimentation, and production workloads. I worked closely with engineering, security, and commercial teams to define API strategy, platform governance, and SaaS delivery models. The platform reached 500K+ downloads, achieved a 4.7 app rating, and reduced customer-reported issues by 40%, while supporting 20% year-on-year revenue growth.

Across roles, I focus on clear product outcomes: platform monetisation, adoption at scale, operational efficiency, and strong stakeholder alignment. I work hands-on with engineering leaders, operate comfortably at P&L level, and make decisions grounded in data, customer insight, and commercial impact. My experience spans e-commerce, fintech, enterprise SaaS, and AI-led platforms, which aligns well with product environments in the Australian market.

I am keen to bring this experience to an organisation building data-driven or AI-enabled products in Australia. I value direct ownership, accountable decision-making, and products that solve real business problems at scale. I would welcome the opportunity to discuss how my background aligns with your product roadmap and growth priorities.

Sincerely,
Anurag Chaudhuri
