Dear Hiring Manager,

I am writing to express my interest in **Software Engineer** opportunities within your organization, with a focus on backend development, healthcare systems, and scalable cloud-based platforms. With over 4 years of experience in Java backend development, I specialize in building robust REST APIs and microservices using Spring Boot, with a strong emphasis on performance, reliability, and clean architecture.

Currently, as a **Freelance Software Engineer**, I continue to build scalable backend services, designing and deploying REST APIs, optimizing database schemas, and ensuring efficient data processing. I have also worked on DICOM-based medical data processing, strengthening my expertise in healthcare interoperability and standards-driven development.

In my previous role at **Toshiba Software India**, I contributed to the development of HL7 FHIR-based EMR/EHR systems, enabling compliant and efficient healthcare data exchange. I developed 30+ RESTful APIs, automated over 1,000 API test cases, and improved API performance by reducing latency by approximately 36%, ensuring SLA compliance. My experience also includes deploying containerized microservices using Docker and Kubernetes, enhancing system stability and reducing defects.

My technical skill set includes Java, Spring Boot, microservices architecture, and API integration, along with hands-on experience in AWS, Linux environments, and CI/CD workflows. I am comfortable working with JSON/XML data formats and have a strong foundation in debugging, testing, and system optimization.

In addition to my professional experience, I published an IEEE paper titled "**Personality Prediction for Online Interview**," where I developed a Big Five prediction model using CNN, facial width-to-height ratio (fWHR), and K-Means clustering. I also presented this work at ICCCI 2022, demonstrating my ability to apply machine learning to real-world problems.

I am particularly interested in contributing to teams working on healthcare platforms, data-intensive systems, and distributed architectures, where accuracy, scalability, and long-term maintainability are critical. As a Chancenkarte visa holder with German language proficiency at A2 level and a strong willingness to learn, I am motivated to integrate into Germany's professional environment and contribute effectively.

I would welcome the opportunity to discuss how my skills and experience align with your organization's needs.

Thank you for your time and consideration.

Sincerely,
Sneha K
