Dear Hiring Manager,

With more than 21 years in IT service delivery and program leadership across telecom, insurance, banking, and automotive, I bring a track record of running stable, high-availability environments for global clients. As Product Owner and Service Delivery Lead for BMW enterprise applications, I own the roadmap and operations for 45+ products, align KPIs and CSAT with business goals, and keep releases predictable and business friendly. This experience matches the expectations for senior IT Service Delivery Manager or Product Owner roles in Germany.

In my recent roles at BMW Techworks India and NTT DATA, squads under my leadership shifted BMW applications to a mature DevOps and SRE model, improved MTTR and SLA adherence, and strengthened audit readiness through standard operating procedures and runbooks. I lead Agile teams, govern contracts and vendors, and run innovation and automation workshops that cut manual effort through Jenkins CI/CD pipelines and RPA for incident and change tasks. At Accenture, I ran the Allianz Global NOC, introduced automation for reports and ticket handling, and supported change governance with CIO and line of business stakeholders.

I combine ITIL IM/PM/CM, service level management, and BCM/DR governance with strong people leadership. I managed 50 performance cycles, built high performing teams of up to 35 engineers, and supported talent acquisition for high demand roles. Certifications in PMP, Prince2, ITIL V4, AWS, and Data Science strengthen my ability to translate business requirements into stable, measurable services. I work comfortably with PLM platforms such as Siemens Teamcenter, PTC Windchill, and Dassault Systems, and my experience with European customers such as BMW, Allianz, MetLife, and Maersk aligns well with regulated and quality focused environments in Germany.

I am fluent in English at C1 level and hold German at B1 level (learning), and I am ready to relocate to Germany for the right opportunity. I would welcome the chance to discuss how my background in DevOps, SRE, PLM, and IT service delivery can help your teams reduce incidents, raise CSAT, and deliver reliable services to business stakeholders. Thank you for considering my application.

Sincerely,

Murali Venkateswaran
