Dear Hiring Manager,

I bring 14+ years in finance operations across accounts receivable, payroll processing, dispute resolution, and process automation, and I am seeking to contribute these strengths to an organization in Germany. My work spans the Middle East and European regions, including hands-on Dutch payroll and SOC audit support. I specialize in building data-driven reporting and automation using Power BI, JIRA, advanced Excel (macros), and Oracle R12 to cut cycle time, lift SLA adherence, and give leaders reliable visibility.

In my current role as Senior SME at Cognizant, I formalized end-to-end training programs, certified operational team leads, and institutionalized recurring modules that keep cross-functional teams aligned. I compiled monthly client decks and SOC audit documentation with 100% SLA adherence, coordinated and resolved 200+ JIRA tickets, and led cash application and non-cash reconciliations for customers across the UAE, Qatar, Kuwait, Lebanon, and the wider AML region. I pair structured root-cause analysis with practical automation: an ATOS efficiency project delivered savings equivalent to 2 FTEs, while macro initiatives cut a 1-hour manual step to 2 minutes and reduced other tasks from 30 minutes to 5 minutes.

Previously at Eaton, I managed collections and dispute resolution for six major accounts, built AR dashboards for leadership, supported the Oracle R12 transition through data alignment and UAT validation, and operationalized dunning practices to reduce overdue balances. I also introduced a OneDrive-based tracker that gave three process teams real-time visibility into debit/credit memos. Earlier at ADP, I ran payroll operations across five departments with 100% monthly accuracy, executed 50+ QC checks per cycle, cleared the Dutch Payroll Process (DPFC) certification, and earned a promotion based on performance. At Searce, I automated manual workflows to trim processing time by 20–30%, and at EXL I honed stakeholder communication and compliance discipline by handling 30+ cases daily across policy, billing, and claims.

I operate with a continuous-improvement mindset grounded in Six Sigma, FMEA, and Business Continuity principles. My toolset includes Power BI for executive-ready reporting, JIRA for work orchestration, Excel macros for automation at the edge of operations, and Oracle R12 for stable core processes. I hold a Bachelor of Commerce (Pune University) and maintain an upskilling cadence through WES credential evaluation, Six Sigma, and ongoing coursework in AI and prompt engineering. My work has been recognized with multiple performance awards at Cognizant and Eaton.

I would welcome the opportunity to help a Germany-based finance organization strengthen AR and payroll operations, raise audit readiness, and convert manual steps into governed automations. I am available for interviews at short notice and can share detailed examples of dashboards, SOPs, and automation artifacts upon request.

Thank you for your time and consideration.

Sincerely,
Shrikant Chandrasekhar Hiremath
