

Dear Hiring Manager,

I am writing to express my interest in engineering leadership roles focused on mobile application delivery, where I can leverage my 12+ years of experience leading Android-first programs for enterprise and consumer products across EU, USA, and APAC markets. I specialize in building cross-functional squads, establishing CI/CD pipelines, and implementing observability frameworks that accelerate delivery while ensuring high quality and platform reliability.

In my current role at HashedIn by Deloitte, I manage multi-client mobile programs, aligning OKRs with release plans and measurable business outcomes. By automating CI/CD with Fastlane and GitHub Actions, I reduced cycle times by 40% and enhanced on-time delivery. I also scaled regression and smoke test automation, boosting QA throughput by 60% and significantly lowering escape defects. Across flagship Android deployments, I have maintained 99.9% crash-free sessions and ensured high user satisfaction.

Previously, I led Android architecture and delivery for ecommerce applications, mentoring engineering teams, establishing review gates, and shipping critical features such as checkout, payments, and catalog modules. My experience spans Kotlin/Jetpack Android development, working iOS (Swift), and backend integrations with Python and REST APIs, enabling me to provide holistic oversight for cross-platform programs.

I am motivated to contribute to organizations that value reliable, scalable, and high-quality mobile solutions. With professional proficiency in English (C1) and working German (B1), I am prepared to relocate and integrate into European teams, aligning engineering execution with global product strategy and business objectives.

Thank you for considering my application. I would welcome the opportunity to discuss how my leadership, technical expertise, and delivery experience can contribute to your mobile engineering initiatives.

**Sincerely,
Pranav J Dev**
