I am applying for Sales Operations roles in Germany where clean CRM data, reliable forecasting, and disciplined cadences are essential to revenue predictability. Across 2+ years in B2B industrial and SMB digital settings, I have improved pipeline hygiene in Microsoft Dynamics 365, built SQL/Excel checks to validate stage integrity, and aligned sales, marketing, and operations to lift meeting rates and on-time fulfillment.

At Zenith Industrial Rubber Products, I manage full-cycle prospecting to onboarding and keep Dynamics 365 accurate through routine stage audits and win-loss tagging. By refining lists, messaging, and follow-up sequences, I increased meetings set by 15-20%. I also ran weekly pipeline reviews and probability guardrails by stage, raising forecast accuracy by 8-12%. Working closely with inventory and dispatch, I helped prevent stockouts and protect promised ship dates on committed deals tightening the handoff from quote to shipment.

Previously, as a consultant to SMBs, I set up lightweight CRM trackers and dashboards for CAC, conversion gates, and follow-up SLAs, which improved inbound lead volume by 10–15%. Earlier, at The Web Store, I coordinated campaigns and analyzed funnel performance to sharpen offers and next-cycle creative. These experiences strengthened my ability to translate GTM goals into measurable operating rhythms, lead scoring, territory targeting, capacity planning, and SLA adherence supported by SQL/MySQL, Excel analysis, and documentation for repeatability.

I bring a documentation-led approach, a bias for KPI visibility, and practical experience operating across APAC/EU contexts. I am currently learning German (A2) and am prepared to ramp quickly on local processes and tools.

I would welcome the opportunity to discuss how I can help your team improve forecast reliability, pipeline quality, and cross-functional handoffs. Thank you for your time and consideration.

Sincerely,

Ashiq Ahamed
