Dear Hiring Manager,

I am writing to express my interest in contributing my expertise in data center electrical engineering and large-scale project execution to your organization in Germany. With over 9 years of experience in delivering complex data center projects up to 18MW IT load, I bring a proven ability to design, execute, and commission mission-critical electrical infrastructure that meets stringent industry standards.

In my current role as Deputy Manager - Electrical Department at Blue Star Ltd., I lead high-profile data center projects, including a 10MW Phase I facility for CapitaLand Hyderabad and an 18MW Tier-4 ST Telemedia GDC project in Pune. I have successfully managed CxL1–CxL7 commissioning phases for Microsoft data centers, overseeing design reviews, FAT, QA/QC, IST, and turnover while ensuring compliance with Tier-4/Uptime Institute standards. My approach combines technical precision with robust project management - controlling budgets exceeding ₹200 crore, optimizing resource allocation, and maintaining on-time delivery rates above 95%.

Previously, as Assistant Project Manager at Shree Electricals & Engineers, I directed the installation and commissioning of electrical infrastructure for multiple data center environments, including UPS systems, bus trunking, lightning protection, HVAC, and chiller systems. This experience deepened my expertise in power distribution systems, critical systems integration, and HVAC planning, enabling me to deliver projects on schedule and within budget while ensuring full regulatory compliance.

I hold a Bachelor of Technology in Applied Electronics & Instrumentation from Rajasthan Technical University, equipping me with strong engineering fundamentals to complement my field experience. My skills span data center electrical design, power distribution, electrical safety, HVAC systems, project planning, stakeholder engagement, and energy efficiency compliance - all critical to ensuring reliability, scalability, and operational excellence in modern data center facilities.

I am eager to bring this blend of technical depth, leadership experience, and project execution capability to Germany's dynamic data center and infrastructure sector. I am confident my background aligns well with your organizational goals, and I am ready to contribute to innovative, large-scale projects that demand precision, efficiency, and reliability.

Thank you for considering my application. I welcome the opportunity to discuss how my experience can support your team's objectives and deliver high-value outcomes.

Kind regards,
Naushad Shaikh
