Dear Hiring Manager,

I am writing to express my interest in engineering and project leadership roles within sterile and oncology injectable manufacturing. With over 16 years of experience improving EU-GMP Annex 1-compliant operations, commissioning complex equipment, and enhancing line reliability, I bring a strong mix of technical expertise, regulatory depth, and people leadership.

Across my career, I have managed vial, ampoule, lyophilization, and dry-powder injectable lines, consistently increasing throughput, OEE, and reliability while strengthening compliance. My work spans CSV (21 CFR Part 11/GAMP 5), QRM, CAPA, change control, and digital systems such as TrackWise, LIMS, SAP, EDMS, and SCADA.

I have delivered multiple greenfield and retrofit projects, executed FAT/SAT and IQ/OQ/PQ, revived long-idle lyophilizers, optimized sterilization cycles, and ensured robust operation of CIP/SIP, WFI, pure steam, HVAC/EMS, and sterilization tunnels. I have led teams of 20–30 members, managed CAPEX/OPEX, improved documentation governance, and consistently strengthened audit readiness under EU-GMP, WHO-TRS, and USP frameworks.

With a proven track record of reducing downtime, rejects, cycle times, and utility variance, I am confident in my ability to contribute to organizations seeking reliability improvement, compliance excellence, and efficient sterile manufacturing performance. I also bring strong English proficiency and intermediate German (A2), supporting smooth transition into Germany-based roles.

Thank you for considering my application. I look forward to the opportunity to add value to your team.

Sincerely,
Nishant Chaudhary
