Dear Hiring Manager,

With 5+ years of experience delivering data platforms and analytics solutions across Accenture and Cognizant, I specialize in Snowflake, dbt, and SQL designing reliable ELT pipelines, optimizing performance and cost, and enabling trustworthy, business-ready data.

At Accenture, I build and maintain Snowflake data models, manage multi-environment deployments, and tune virtual warehouse performance for predictable SLAs. I have delivered end-to-end analytics translating requirements into versioned Power BI/Tableau dashboards while enforcing CI/CD practices, code review discipline, and documentation standards. Prior to this, at Cognizant, I owned SQL Server performance for migration programs, optimizing queries, indexes, and execution plans and standardizing deployment procedures that strengthened pipeline reliability.

My approach blends strong engineering fundamentals with practical stakeholder alignment. I design dimensional models (star/snowflake), implement incremental strategies and SCD patterns, and leverage Snowflake features such as Streams & Tasks, Time Travel, zero-copy clone, and RBAC to balance agility, governance, and cost. I routinely profile queries and usage, right-size warehouses, and introduce guardrails (tests, monitoring, and change control) so teams can move quickly without compromising quality.

Beyond platform expertise, I value clear communication and shared ownership. I simplify complex problems into maintainable designs, write precise documentation, and create feedback loops that keep product, data, and operations aligned. I am comfortable mentoring peers, collaborating across functions, and presenting trade-offs to non-technical stakeholders.

I would welcome the opportunity to contribute to your roadmap by improving pipeline performance, strengthening data quality, and accelerating time-to-insight for your teams and customers. I am open to relocation to Germany/EU and can meet your timeline for interviews and onboarding.

Thank you for your time and consideration. I would be pleased to discuss how my Snowflake/dbt background and delivery mindset can support your company.

Sincerely,
Jophin Mukesh
