Dear Hiring Manager,

I am applying for **Senior Android Developer, Android Technical Lead** roles in Germany. I build Android apps in **Kotlin and Java** with a strong focus on **offline-first workflows, location and maps, background services, and push notifications**. Across 7+ years, I have delivered production Android features that integrate **REST APIs (Retrofit, Volley), SQLite/SharedPreferences persistence, JSON/XML parsing, and Firebase Cloud Messaging (FCM)** while maintaining stability across Android versions and devices.

In my current Senior developer role at Innoright Solutions, I drive feature delivery for **maps, GPS tracking, offline flows, and notification pipelines**. I reuse network and storage components to speed up releases and standardize engineering practices across the team. In my previous lead role at L&T Technology and Services, I shipped location- and sensor-driven modules and optimized **threading and background work** to protect UI performance during continuous tracking and map updates. I also tightened triage workflows using **ADB and Logcat**, reducing defect resolution time and improving release readiness.

Germany's Android hiring bar values reliability, privacy, and performance in real-world conditions. I align well with that bar through hands-on work in **public safety and citizen services** (TSCOP, CCTNS 2.0, HawkEye Ultra) and consumer-grade tracking apps (TIAA). I deliver mobile experiences that stay functional with poor connectivity, handle device constraints during background execution, and support fast incident or user workflows through responsive UI and timely notifications.

I bring strong execution on Android fundamentals plus practical delivery discipline: API contract alignment with backend teams, robust parsing and validation, caching and sync patterns, and performance-minded implementation for long-running location use cases. I am ready to contribute in Germany from day one in a team that builds mobile products where reliability and UX directly affect user trust.

Sincerely,

Vamshi Krishna Sathu
