

MALATESH SUDARSHAN

Bengaluru, India | +91 8553333802 | malatesh.sudarshan@gmail.com |LinkedIn: Malatesh Sudardhan

Professional Summary

Technology executive with over 12 years of cross-industry experiences spanning automotive, healthcare, finance, cybersecurity, and open-source ecosystems. Specialized in building and scaling valuation platforms, modernizing legacy systems, and architecting risk-reduction tools. Consistently delivered measurable outcomes while leading technical teams across high-impact projects.

Skills

- Java
- Python
- Apache Kafka
- Vert.x (Microservices like spring boot)
- Jenkins
- Presentation skills
- SQL
- Go-Lang
- Kotlin
- SPRING
- CAMEL

Work History

Vice President (Lead Software Engineer)

Senior Software Engineer (03/2019 to 09/20) 04/2022 to Current

J.P Morgan Chase and Co

- Engineered “Third Party Valuations” to replace multi-million-dollar legacy infrastructure, streamlining client-facing fund valuation workflows.
- Architected and implemented financial instrument booking modules to support fund and share valuation.
- Developed “Exception Monitor,” a diagnostics tool that reduced operational overhead and mitigated risk.
- Introduced a FIFO-based system restructure, resulting in ~\$90M cost savings.
- Delivered cross-platform solutions using both Java and Python with zero ramp-up delay.
- Directed team members in decommissioning legacy systems and improving code maintainability.
- Resolved high-severity stability issues, cutting bug rates and enhancing system resilience.
- Earned top-tier performance ratings for three consecutive years (“SOS,” “SSS,” “SSS”).

Technical Lead

09/2020 to 03/2022

Encora Innovation Labs – Bengaluru, India

- Coordinated requirement gathering and implementation across global teams, ensuring alignment with US stakeholders.
- Secured the project ecosystem by integrating encryption algorithms in Kotlin, Ruby on Rails, and Go.
- Authored infrastructure code for Kafka to enhance performance under high-load conditions.

- Refactored legacy monoliths into modular microservices to improve system scalability and maintainability.

Senior Software Engineer

Cerner Health Care India, India

09/2015 to 01/2019

- Contributed open-source code to OpenNMS; multiple pull requests traceable via “OpenNMS malatesh.”
- Decomposed monolithic applications into microservices using Vert.x and event-driven design.
- Designed the “Radix Tree Parsing” system to interpret syslog messages from diverse vendors.
- Built Jenkins-based CI/CD pipelines, automating deployments via Chef and OpenStack on Linux hosts.
- Integrated Apache Kafka to achieve high-throughput messaging and system decoupling.
- Recognized twice as a “Distinguished” contributor for project-critical deliverables.

Senior Software Engineer

Robert Bosch Engineering and Business Solution, India

08/2012 to 08/2015

- Delivered production-ready business logic for patented automotive ECUs using Java and JavaFX.
- Led requirements analysis and full-cycle implementation of infotainment and automotive solutions.
- Supported system validation and post-deployment tuning for mission-critical embedded applications.

Education

Bachelor of Engineering: Computer Science

Sambhram Inst of Technology, India

2012
