Dear Hiring Manager,

I am writing to express my interest in senior engineering and technology leadership opportunities within your organization. With over 12 years of experience across industries including finance, healthcare, automotive, and cybersecurity, I bring a proven track record of building scalable systems, modernizing legacy platforms, and delivering high-impact technical solutions.

Currently, I serve as Vice President (Lead Software Engineer) at J.P. Morgan Chase & Co., where I have led the design and development of critical financial platforms, including a Third Party Valuations system that replaced multi-million-dollar legacy infrastructure. My work has consistently focused on improving operational efficiency and reducing risk, highlighted by initiatives such as a FIFO-based system restructuring that resulted in approximately \$90 million in cost savings. I have also developed diagnostic tools like "Exception Monitor" to enhance system stability and reduce operational overhead.

Previously, as a Technical Lead at Encora Innovation Labs, I played a key role in driving system scalability and security by refactoring monolithic architectures into microservices and integrating encryption frameworks across multiple technology stacks. My experience also includes building high-throughput, event-driven systems using Apache Kafka and designing robust infrastructure solutions for high-load environments.

During my tenure at Cerner Healthcare and Robert Bosch Engineering, I contributed to open-source ecosystems, developed CI/CD pipelines, and delivered mission-critical applications in both enterprise and embedded systems domains. These roles strengthened my expertise in distributed systems, microservices architecture, and full software development lifecycle management.

I am particularly recognized for my ability to quickly adapt to new technologies, lead cross-functional teams, and deliver resilient, scalable solutions under demanding timelines. My technical proficiency in Java, Python, Kafka, and modern microservices frameworks, combined with a strong problem-solving mindset, enables me to drive innovation and measurable business outcomes.

I am excited about the opportunity to contribute my expertise to your organization and would welcome the chance to discuss how my experience aligns with your goals.

Thank you for your time and consideration.

Sincerely,
Malatesh Sudarshan
