Dear Hiring Manager,

I am writing to express my interest in **MRB Engineer or Aerospace Structural Analysis** roles within your organization. With professional experience supporting aero-engine programs for global aerospace clients and a strong background in structural analysis and non-conformance resolution, I bring expertise in MRB substantiation, stack-up analysis, and FEA-based engineering assessments for regulated aerospace hardware.

In my current role as an **MRB Engineer at Cognizant**, I perform engineering assessments and dispositions for service and production hardware in accordance with GE standards and program requirements. My work involves evaluating quality notifications, conducting stack-up and assembly checks, and documenting stress margins to support repair approvals and conformity decisions. By implementing reusable templates and predefined limit cases for recurring defects, I reduced disposition lead time by approximately twenty percent while improving first-time decision accuracy through close collaboration with design and manufacturing teams.

Previously, as a **CAE Engineer at Cyient** supporting Pratt & Whitney programs, I performed structural and thermal FEA analysis for bearing compartment components. Using ANSYS Workbench, APDL scripting, and NX-based models, I evaluated load conditions including thermal and pressure effects to assess LCF, HCF, and foreign-body object risks. Through automated analysis workflows and defect-to-load mappings, I improved quality notification closure rates and supported MRB and design teams in making informed engineering decisions.

Earlier in my career, I worked as a **Quality Assurance Engineer at Micro Precision**, where I maintained non-conformance records, inspection documentation, and traceability packs for customer approvals. My efforts helped improve first-pass yield and strengthened compliance with documentation and audit requirements.

I hold a **Bachelor's degree in Mechanical Engineering from Jeppiaar Engineering College** and have developed strong analytical capabilities through hands-on work with ANSYS, NX, and structured engineering analysis methods. My experience working across design, manufacturing, and quality teams has strengthened my ability to resolve non-conformances efficiently while maintaining strict aerospace compliance standards.

Germany's advanced aerospace industry and strong engineering ecosystem strongly align with my career goals. With my background in MRB engineering, structural analysis, and aero-engine hardware substantiation, I am confident in my ability to contribute effectively to engineering teams focused on maintaining airworthiness and operational reliability. I also have elementary proficiency in German and continue improving my language skills to integrate effectively into professional environments in Germany.

Thank you for considering my application. I would welcome the opportunity to discuss how my MRB and structural analysis experience can support your aerospace engineering programs.

Sincerely,
Joel Altrin J
