Summary

MRB Engineer specialising in substantiation, QN triage and stack-up for regulated aero-engine hardware. Delivers clear dispositions with stress margins and conformity statements aligned to GE and Pratt & Whitney standards. Partners with design and manufacturing to restore form-fit-function and prevent repeat non-conformances. Strong FEA base using ANSYS/APDL and NX; authors analysis notes, test plans and CAPA. MVP awardee for delivery quality; accelerates cycle-time through reusable templates and checklists.

Core Skills

- **MRB & Compliance:** dispositions, substantiation, concessions, repair approvals, conformity packs
- **Structures Analysis:** limit strength, LCF/HCF, FBO, flange separation, min fit, stack-up, stress margins
- **Quality Engineering:** QN evaluation, root-cause, CAPA linkage, risk
- **Tools:** ANSYS Workbench/APDL, NX
- CAD, SolidWorks, MS Excel/Word, templates & macros
- **Stakeholders:** design, manufacturing, supply chain, customer engineering, client reporting

Experience

Cognizant

August 2024 – Present

MRB Engineer

Bengaluru, India

- Own MRB analyses and dispositions for service/production parts per GE standards and program controls.
- Run stack-ups and assembly checks; document stress margins and recommended repair actions in reports.
- Cut disposition lead time by ~20% using templates and pre-calculated limit cases for frequent defects.
- Lift right-first-time decisions by ~15% via cross-functional reviews with design and manufacturing.

Cyient

March 2022 – August 2024

CAE Engineer

Hyderabad, India

- Provide FEA inputs to guide MRB/design on Pratt & Whitney bearing compartment components.
- Build converged thermal/pressure models; assess LCF/HCF and FBO to support conformity decisions.
- Close ~30% more QNs per quarter with reusable APDL scripts and defect-to-load mappings.
- Reduce rework by ~25% by proposing geometry/process changes from stress hot-spot insights.

Micro Precision

October 2021 – March 2022

Quality Assurance Engineer

Chennai, India

- Maintain inspection records and nonconformance logs supporting accept/reject with stress rationale.
- Standardise documentation packs for customer sign-off; enhance batch traceability and compliance.
- Lift FPY by 8–10% by instituting feedback loops and controlled documentation revisions.

Projects

GE9X OGV / Lower Splice Plate / MLE *Bengaluru, India* August 2024 – Present

- Execute MRB assessment for GE9X hardware to restore form–fit–function and maintain airworthiness.
- Perform stack-ups and stress checks; compile margins and conformity documentation for approvals.
- Shorten cycle-time by ~20% using standard limit cases and defect-class templates.
- Align with GE methods and customer engineering to prevent repeat non-conformances.

Pratt & Whitney 24K No4 Bearing Compartment *Hyderabad, India* March 2022 – August 2024

- Deliver failure-mode suite and certification-ready reports to inform MRB and design choices.
- Model thermal/pressure loads; evaluate LCF/HCF and FBO for conformity and risk acceptance.
- Increase QN closure throughput by ~30% with APDL automation and review checklists.
- Earn MVP (Bronze) for delivery quality and on-time engineering substantiation.

Quality Non-Conformance Analyses *Chennai, India* October 2021 – March 2022

- Support accept/reject recommendations via defect-driven stress rationale and traceable records.
- Standardise doc packs for sign-off; improve traceability and audit readiness across batches.
- Lift FPY by 8–10% by closing gaps in revision control and feedback capture loops.

Education

Jeppiaar Engineering College, Chennai 2016 – 2020

B.E. Mechanical Engineering (CGPA: 7.32) *Chennai, India*

TVS Training 75 days

Advanced Technical Program *India*

Awards

- Most Valuable Performer — Bronze (24K No4 Bearing Compartment).
- Most Valuable Performer — Bronze (30K HSE MTF QNs).

Languages

- English – Full Professional Proficiency (C1)
- German – Elementary Working Proficiency (A2)
