Dear Hiring Manager,

I am writing to express my interest in a senior Regulatory Affairs role within the medical device or in-vitro diagnostics industry in Germany. With over 16 years of international experience across the United States, Canada, Europe, and Asia, I have developed a deep understanding of global regulatory frameworks, including FDA 510(k), PMA, Q-Sub, EU MDR/IVDR, and Health Canada MDL submissions. I have consistently worked at the forefront of innovation in digital health, diagnostics, and high-risk devices, driving compliance, regulatory strategy, and successful market access.

My experience spans leading regulatory activities for a wide range of technologies, including SaMD, AI/ML-based tools, companion diagnostics, renal systems, and laser-based therapeutic devices. I have played a critical role in shaping regulatory strategies for emerging platforms such as Alzheimer's disease biomarkers and digital therapeutics. In roles with companies such as Abiomed, Beckton Dickinson, Siemens Healthineers, and Neurocrine, I have been responsible for the full life cycle of regulatory documentation authoring technical files, clinical evaluations, and post-market surveillance reports and have engaged directly with Notified Bodies, FDA, and Health Canada to ensure timely approvals. My recent work has included managing MDR technical files, leading Q-Sub and DeNovo pathways for FDA, developing IVDR-compliant QMS procedures, and remediating Class III product complaints through structured risk analysis.

In addition to regulatory execution, I bring strong technical and leadership capabilities, including supervising cross-functional teams, guiding design control compliance, and creating new procedures to support clinical and post-market activities. I hold a Master of Science in Industrial Engineering from the University of Illinois at Chicago and a Bachelor of Technology in Mechanical Engineering from Vellore Institute of Technology. My education, combined with hands-on regulatory leadership and RAC (Devices) certification valid through December 2025, enables me to align technical innovation with regulatory excellence.

Germany's reputation for medical innovation and precision aligns strongly with my professional ethos. I am enthusiastic about the opportunity to contribute to a globally focused organization committed to high standards of safety, performance, and clinical value. My diverse background, spanning Class I to Class III devices and covering both pre-market and post-market phases, positions me well to support your regulatory strategy and ensure successful navigation of complex global requirements.

Thank you for considering my application. I welcome the opportunity to contribute to your regulatory affairs team in Germany and would be pleased to discuss how my experience aligns with your current needs.

Sincerely,
Karthik Natesan
