Dear Hiring Manager,

I am applying for the Front-End (React) Developer position at your organization. With 5+ years of experience delivering web applications in Agile teams supporting EU/APAC stakeholders, I specialize in building performant, maintainable user interfaces using React, TypeScript, and modern front-end tooling. My focus is on clean component architecture, responsive UI delivery, and measurable UX improvements through performance tuning and disciplined engineering practices.

In my current role at Phenomtec Solutions, I own end-to-end delivery of React-based web applications within sprint cycles. I build React and TypeScript interfaces, collaborate closely with backend teams on API integration, and ensure UI behavior remains reliable across releases. I have improved first-load experience and Lighthouse performance by applying lazy loading and code splitting, while strengthening overall quality through code reviews and test automation to reduce regression escapes.

My experience also includes working across modern JavaScript ecosystems such as Next.js and Vue, which helps me choose pragmatic approaches for routing, state handling, and UI composition. I am comfortable translating product requirements into reusable components, maintaining consistent styling systems, and optimizing pages for performance, accessibility, and real-world device constraints.

I would welcome the opportunity to contribute as a React-focused front-end engineer and help your team ship fast, scalable, and user-friendly experiences. **As a Chancenkarte Visa Holder, I am prepared to relocate to Germany and start the process quickly based on role requirements.** Thank you for your time and consideration. I look forward to discussing how my skills align with your needs.

Warm regards,

Jishnu S Nair
