Dear Hiring Manager,

I am writing to express my interest in data quality and data governance roles in Germany. With 16 years of experience across Health & Welfare, Defined Benefits, Defined Contribution, Core Banking, and HRIS domains, I specialise in building audit-ready, well-governed data environments using SAS, SQL, Python and BI tools such as Tableau and Power BI. My work has consistently focused on strengthening controls, ensuring regulatory compliance, and turning complex data into reliable evidence for risk and business stakeholders.

In my current role as Senior Assistant Vice President at Wells Fargo, I lead data analytics and quality controls for lending remediation. Day to day, this means aligning data lineage, documentation, and evidence with regulatory expectations; designing and automating SAS/SQL checks; and building DQ dashboards that give risk, audit, and business leaders clear, timely visibility. I also drive exploratory data analysis to validate population coverage, reduce false positives, and increase confidence in remediation outcomes.

Previously at Wipro, I worked as a Lead Programmer Analyst and Project Team Lead, managing a 4-member team responsible for HRIS and Health & Welfare ETL pipelines into DB2 for EU and US clients. I designed reusable SAS macro frameworks with embedded validations, implemented change-control and reconciliation processes, and worked directly with clients and stakeholders to clarify requirements, discuss issues, and agree on remediation plans. Earlier at Aon Hewitt, I again acted as project team lead for a 4-member team, delivering SAS/SQL-based analytics and DQ profiling across multi-country Benefits portfolios, while coordinating closely with client-side stakeholders on reporting, migrations, and audit preparation.

Across these roles, I have built a track record of combining technical depth, governance discipline, and stakeholder communication. I bring experience working with regulated environments, comfort with cross-functional collaboration, and the ability to mentor analysts and standardise DQ practices across teams. Alongside my MSc and PG Diploma in Data Science, I offer strong English skills (C1) and developing German (A2) and am fully prepared to relocate to Germany for the right opportunity.

Thank you for considering my application. I would welcome the opportunity to discuss how my background in data quality, governance, and stakeholder-driven analytics can support your organisation's regulatory and reporting goals in Germany.

Sincerely,
Tamilselvi Chelliah
