Dear Hiring Manager,

I am a data engineering/ETL lead with 10+ years delivering stable, audit-ready data platforms across banking, logistics, and public sector programs. My recent work focuses on modernizing IBM DataStage estates to Cloud Pak for Data (CP4D), orchestrating pipelines with Astronomer Apache Airflow, and migrating analytical workloads to Google BigQuery.

At Tech Mahindra, I lead a regulated banking data-warehouse migration from DataStage 11.7 to CP4D while moving marts from Teradata/Oracle to BigQuery/PostgreSQL. I designed incremental patterns, contract tests, and Airflow runbooks for a 5 to 8 engineer pod, increasing first-pass success, trimming batch windows, and reducing manual restarts. I also standardized reviews and hardened transforms, which lowered defect leakage to QA and accelerated teammate onboarding.

Previously, for Bank ABC (Egypt) via Jaitra Technologies, I executed a multi-environment upgrade, tuned regression hotspots, and ran Platinum-based file/DB parity checks. We stabilized long-running jobs and restored SLAs within the same cycle for priority streams. Earlier projects at Altimetrik (FreightVerify) and Cognizant (RBC) strengthened my release governance and audit discipline: UrbanCode pipelines, RMT approval flows, unit test artifacts, and predictable cutovers that reduced rollbacks.

I bring hands-on experience across IBM DataStage/CP4D, Airflow (Astronomer), BigQuery, Oracle, and PostgreSQL, plus pragmatic practices around restart/recovery, SLA design, incident RCA, and documentation. I work directly with platform, security, and BI teams, and I am comfortable inferring scale where metrics are not tracked, then instituting the measurement needed for ongoing improvements. I am relocation-ready for Germany and operate fluently in international settings; English: Full Professional (C1), German: Intermediate Working Proficiency (B1).

I would welcome the opportunity to discuss how these outcomes and methods can support your company in hardening data reliability, shortening batch windows, and improving time-to-insight across EU programs. Thank you for your consideration. I am available for interviews across EU time zones and can join on short notice.

Sincerely,

Ravisankar Mohan
