Dear Hiring Manager,

Head of Data Engineering roles in Germany demand leaders who can stabilise platforms, enforce governance and still move fast on innovation. Over 17 years, I have built and led enterprise data platforms, analytics solutions and generative AI initiatives across HR, GBS and finance domains, with a core focus on Snowflake, AWS and strong data governance.

In my current role at AstraZeneca, I own the HR and GBS Snowflake data platform on AWS and partner with senior stakeholders to turn business questions into reliable data products. Recent work reengineered Snowpipe and micro-batch pipelines and tuned compute clusters to cut refresh latency by about 70% while stabilising SLAs for global users. I also standardise domain data products, metrics, CI/CD and code reviews, which lifted deployment reliability and productivity for more than fifty engineers.

GenAI now sits at the centre of my work. I design and deliver natural language analytics and RAG based assistants, including an NLQ bot, a BAU support assistant and a glossary generator that run under GDPR and SOX controls. These solutions reduce manual effort and incidents by roughly 30% and show how LLM applications can operate safely on governed data. Earlier roles at Systech, Virtusa, Fulcrum, Symphony and Ness built my foundation in ETL, dimensional modelling, Netezza and Talend across insurance, telecom, media and airline domains, and gave me hands-on experience with complex batch windows and strict SLAs.

Teams respond well to a clear technical direction and predictable execution. I set roadmaps, coach engineers, and work closely with product, security and finance to balance cost, performance and compliance. Certifications in Snowflake SnowPro Core, AWS Solutions Architect Associate and Generative AI reinforce this practical experience and align with the technology stacks common in German enterprises.

I am keen to contribute this mix of data platform leadership, GenAI delivery and governance experience to a German organisation that wants to scale its modern data stack. I would welcome the opportunity to discuss how my background can support your data and AI strategy.

Sincerely,

Santhosh Kumar Kannan
