Dear Hiring Manager,

I am a production and operations manager in textiles with more than four years of experience leading shop floor execution, stabilising output, and improving quality in fast moving retail and fulfilment contexts. My background combines Lean practices, Acceptance Quality Limit checks, and Corrective and Preventive Action routines to drive measurable results that align with German manufacturing expectations.

In my current role as Manager at a textile shop, I improve on time order fulfilment to approximately 95% through daily production huddles and targeted bottleneck removal. I reduce defects by approximately 25% with disciplined Acceptance Quality Limit checks and standardised checklists. I lower stockouts by approximately 30% by setting reorder points and leading weekly vendor follow ups, and I shorten changeover time by approximately 15% through 5S and visual controls. These improvements strengthen first pass yield, plan versus actual adherence, and overall delivery reliability.

I bring a data driven approach that uses Microsoft Excel trackers for goods receipt to put away to sale, lead time, and ageing, supported by basic business intelligence. I align closely with merchandising, procurement, and store leadership to balance service level and working capital, and to protect launch

timelines across Germany and the European Union. My working style is structured, transparent, and compliance minded, with clear documentation and stakeholder communication.

I am motivated to contribute these outcomes in a German production environment where Lean discipline, safety, and quality are core. I am ready to relocate, manage shift based operations, and adopt enterprise resource planning or material requirements planning systems including SAP basics. I would welcome the opportunity to discuss how my experience in throughput improvement, defect reduction, and inventory hygiene can support your operational goals.

Sincerely,

Mohan Pradeep Addala
