Summary

Production and operations manager in textiles with 4+ years improving throughput, quality, and on-time delivery. Leads shop floor teams and applies Lean methods, Acceptance Quality Limit checks, and Corrective and Preventive Action to reduce defects. Builds vendor discipline and materials flow to prevent stockouts and overstock. Implements Standard Operating Procedures and 5S with visual controls to stabilise output and reduce unplanned stoppages, collaborating with merchandising and procurement to meet launch timelines in Germany and the European Union.

Core Skills

- **Lean and Operations:** 5S, Kaizen, root cause analysis, standard work, workload balancing
- **Production Planning:** Line balancing, capacity planning, shift scheduling, throughput optimisation
- **Quality Management:** Acceptance Quality Limit, in process quality control, final inspection, defect Pareto, Corrective and Preventive Action
- **Materials and Inventory:** Reorder points, inventory turns, goods receipt to put away cycle, vendor follow-ups
- **Tools:** Microsoft Excel with Pivot and Lookup, enterprise resource planning or material requirements planning, basic business intelligence
- **Soft Skills:** Team leadership, negotiation, stakeholder management, documentation

Experience

Textile Shop

October 2021 – Present

Manager

Remote

- Improve on time order fulfilment from approximately 82% to approximately 95% by running daily production huddles and removing bottlenecks to protect launch timelines.
- Reduce defects by approximately 25% by applying Acceptance Quality Limit checks and Corrective and Preventive Action routines and by standardising quality checklists across product lines to raise first pass yield.
- Lower stockouts by approximately 30% by setting reorder points and leading weekly vendor follow ups to increase inventory turns to approximately eight per year.
- Shorten changeover time by approximately 15% by implementing 5S and visual controls to improve safety compliance and line stability.

Projects

Lean Cell Redesign

- Eliminate idle time and increase throughput in a busy apparel cell to meet plan versus actual targets.
- Rebalance tasks across staff and align sequence to reduce wait time and improve work flow stability.
- Achieve approximately 10% to 12% throughput lift with no additional headcount.

Quality Control Digitisation

- Accelerate corrective action turnaround and improve defect visibility for apparel lines.
- Move from paper checks to Microsoft Excel trackers and enable defect Pareto by type for fast analysis.
- Close corrective and preventive actions faster and improve quality consistency across lines.

Education

Gandhi Institute of Technology and Management

2021

Bachelor of Commerce

Visakhapatnam, India
