Dear Hiring Manager,

React Native engineering has been the core of my work for the last 4 years, delivering production Android and iOS applications used across learning, wallet, and commerce platforms. My focus stays on stable releases, predictable behavior in production, and clean navigation across complex user flows, reflecting the standards typically expected in Germany-based mobile environments.

My current work at Motion Education involves end-to-end ownership of a production learning app serving a large user base across Android and iOS. Release planning, device compatibility, and store compliance sit alongside daily engineering work. React Native, TypeScript, Redux, and navigation patterns are applied with a strong emphasis on performance, maintainability, and error resilience. Features such as In-App Updates, Deep Linking, Push Notifications, and purchase flows were implemented with attention to edge cases and production stability.

Previous experience at Maestro Technology Services covered wallet, B2B commerce, and media applications, where coordination with backend, QA, and design teams was critical to meeting release schedules. Responsibilities extended beyond feature delivery to include store submissions, post-release issue resolution, and runtime stability improvements using guarded routing, state persistence, and validation controls. These practices reflect engineering standards expected in enterprise and compliance-oriented environments.

Engineering decisions are guided by measurable outcomes: reduced user-facing errors, improved perceived performance through list virtualization and memoization, and smoother navigation across complex flows. I work comfortably with Play Console and App Store Connect, manage signing and provisioning, and support crash triage as part of ongoing production ownership.

Germany's emphasis on quality, documentation, and structured delivery strongly aligns with my working style. I communicate clearly across teams, follow predictable development processes, and value codebases that remain stable under scale. Proficiency in English (C1) and working German (B1) supports collaboration in international teams, and relocation to Germany is actively planned under the Chancenkarte pathway.

I would welcome the opportunity to contribute to a Germany-based mobile team where React Native expertise, production ownership, and long-term maintainability matter. Thank you for your time and consideration.

Sincerely,

Prathiksha Muralitharan
