Dear Hiring Manager,

I am a Senior Product Designer focused on AI UX and agentic workflows for SaaS and enterprise products. Over the past five years, I have owned end-to-end design from research and information architecture to prototyping, usability testing, accessibility, and developer handoff most recently as a founding designer at Orphix, an AI-powered UX platform. I am relocating to Germany and bring experience aligned with EU expectations, including accessibility (WCAG 2.1), privacy-by-design (GDPR/DSGVO), and experiment-driven delivery.

At Orphix, I established prompt-led interaction patterns and a scalable design system that reduced design inconsistencies by roughly 50%, increased early user satisfaction by about 30%, and improved developer readiness. I pair qualitative research interviews and journey mapping with quantitative signals such as task success and time-to-complete to de-risk builds before engineering. Previously, as an independent consultant, I delivered UX for 12+ client products, improving conversion and retention by approximately 20–30% and reducing onboarding drop-off by around 15% through iterative testing and analytics-informed changes.

I collaborate closely with PMs and AI engineers to translate strategy into high-trust, explainable interactions for LLM-powered features. My workflow emphasizes systematic delivery of tokenized design systems, well-documented patterns, and developer-ready assets in Figma and Framer so teams ship faster with less design debt. I operate with OKR alignment and a pragmatic “test-and-learn” cadence to move activation, adoption, and retention metrics. I trained through IIT Bombay’s UX program and continue to work at the intersection of AI and usability.

I am excited by the opportunity to help your company turn your AI roadmap into intuitive experiences that customers adopt and advocate for. I can relocate quickly, integrate with cross-functional teams from day one, and tailor my onboarding plan to your product goals. Case studies and prototypes are available at gitesh.framer.website.

Thank you for your time and consideration. I would welcome the chance to discuss how my background in AI UX, design systems, and metrics-driven product development can support your objectives.

Sincerely,
Gitesh Nagarkar
