Dear Hiring Manager,

I am applying for **Lecturer roles in Civil Engineering** with a focus on Transport and Pavements. I bring 14+ years of work experience across university teaching, applied pavement research, laboratory governance, and industry-facing field studies aligned to road asset and pavement performance priorities.

In my current role as **Assistant Professor at Ramaiah University of Applied Sciences**, I deliver outcome-based teaching across pavements, traffic engineering, and transport planning, backed by structured rubrics, assessment design, and consistent academic standards. I run laboratory programs with SOP-led workflows and QA documentation, and support postgraduate supervision at scale by guiding 35 dissertations across pavement materials, porous asphalt, safety audits, and mobility themes. These responsibilities require strong coordination, clear documentation, and a consistent approach to academic quality and student outcomes.

Alongside teaching, I maintain a research and practice focus that aligns with Australian transport and infrastructure programs. I work with pavement condition assessment inputs and field evaluation methods, including ROMDAS and NSV survey outputs, Benkelman Beam deflection, roughness measures, skid resistance testing, and axle-load studies. I convert these inputs into decision-ready technical reporting that supports rehabilitation planning, overlay inputs, and road safety investigations. My **publication in Discover Civil Engineering (Springer Nature)** and my **patent in pavement distress quantification** reflect a measurable track record in applied research, technical writing, and innovation relevant to transport infrastructure outcomes.

I can contribute to teaching delivery, laboratory leadership, and research agenda in pavement engineering and transport systems. I would welcome the opportunity to discuss how my teaching, supervision, and applied pavement research experience can support your curriculum, student success targets, and industry engagement outcomes.

Sincerely,

Yateen Lokesh
