Dear Hiring Manager,

I am writing to express my strong interest in a Software Engineer or Technical Lead position in Germany within the automotive and embedded systems sector. With more than 7 years of progressive experience in Embedded Software Testing, Automation, and Release Delivery combined with international exposure through my recent assignment in Munich I bring the technical expertise and leadership required to deliver high-quality software solutions for next-generation automotive technologies.

In my current role as Technical Lead at KPIT Technologies, I manage release delivery for BMW's Control Charging Unit project. I lead a 10-member release team that has achieved a 95% on-time delivery rate across multiple I-Step Software Maturity cycles. By introducing structured release governance, I reduced post-release defects by 30% and improved compliance metrics by 20% within two quarters. My leadership extends beyond delivery oversight; I mentor engineers, streamline resource allocation, and drive stakeholder alignment, cutting release delays by 15% and ensuring seamless coordination across global teams in India and Germany.

Previously, at Harman International, I designed and executed automated testing frameworks in C#, reducing regression cycle time by 40% while ensuring high-quality infotainment integration for global OEMs. Earlier in my career with United Telecoms Ltd., I engineered software solutions for high-speed Broadcom network cards, strengthening my foundation in Linux-based embedded development and system performance optimization.

My academic background in Electronics and Communication Engineering (Bachelor's and Diploma) has equipped me with a strong technical base, while my hands-on expertise with C, Shell Scripting, Linux, Autosar integration, CI/CD practices, and advanced testing/debugging tools ensures readiness for complex automotive projects. Having worked onsite in Munich, I also understand the expectations of German automotive clients and the rigor required to meet their engineering standards.

I am eager to contribute this blend of technical depth, leadership, and proven delivery record to your organization in Germany. I am confident that my ability to lead cross-functional teams, implement process efficiencies, and deliver defect-free releases will add immediate value to your engineering initiatives.

Thank you for considering my application. I welcome the opportunity to discuss how my experience can support your company's growth and innovation in the German automotive sector.

Sincerely,
Shilpa Geetha Parandhaman
